announcements on the Children and Screens website www.childrenandscreens.com to learn more about the ABCD Study and all its latest research updates.

ADOLESCENT BRAIN AND COGNITIVE DEVELOPMENT (ABCD Study)

The ABCD Study is an NIH-funded, national, multi-center research project that seeks to understand how brain development is affected by the use of digital media and other environmental factors throughout childhood and adolescence. Starting in 2017, this longitudinal study will follow a large cohort of children (ages 9 to 11) from across the United States, focusing on their brain development and how it relates to their use of digital media.

The study will be conducted at multiple sites across the country, including the University of Arizona, Boston Children's Hospital, and the University of Pennsylvania. The ABCD Study aims to provide important insights into the relationship between digital media and cognitive development, and to help inform policymakers and parents about how to make informed decisions about media use.

Please visit our website www.childrenandscreens.com to learn more about the ABCD Study.

Health Update: According to the AAP's news release, "the new policy statement is intended to help parents and caregivers make informed decisions about the use of digital media by children and adolescents, while also supporting the healthy development of children and teenagers as they navigate the digital world."

Children and Screens: Institute of Digital Media and Child Development

Thank you for your interest in digital media and child development. If you have any questions or comments, please feel free to contact us at 631-675-6023 | NYC and Long Island | www.childrenandscreens.com

CALL FOR LETTERS OF INTENT

The Children and Screens Institute is seeking letters of intent for its inaugural Research Grants program designed to support new scientific research projects that seek to advance our knowledge and understanding of digital media and child development.

The grants program is intended to support interdisciplinary scientific research projects that seek to advance our knowledge and understanding of digital media and child development. Piloting grants of up to $250,000 are intended to deliver seed funds to interdisciplinary scientific research projects that seek to advance our knowledge and understanding of digital media and child development.

In addition to piloting grants of up to $250,000 for the design of a national multi-center study, smaller grants of up to $100,000 are intended to deliver seed funds to interdisciplinary scientific research projects that seek to advance our knowledge and understanding of digital media and child development.

By request, we are curating information (researched on Google Scholar) for parents and experts focused on digital media and child development.

The Institute is pleased to announce its inaugural Research Grants program designed to support cutting-edge research and what further research is needed, and post any questions/comments or concerns to help us generate an amazing public resource.

CALL TO ACTION:

The Institute is excited to announce its inaugural Research Grants program designed to support cutting-edge research and what further research is needed, and post any questions/comments or concerns to help us generate an amazing public resource.

We look forward to hearing from you soon! Many thanks!
